

Dear Believers,

ONCE upon a time long long ago sometime between the ice-age and the stone age there existed something **loved** and **cherished** by the believers.

Recently, people were of the opinion that it was extinct, close examination of a few **fossils** unearthed what many believed to be the case.

Then something magical happened, the believers started questioning openly about the existence of what they held so close to their hearts for which it seemed that the wait was like a **few million light years**.

Soon it was clear to the **believers** that they would have to take the task in their own hands. A **group** came together and started motivating each other, they knew they had nothing to lose, they were exposed to the conditions and each hurdle was overcome with **courage**.

Ideas started to flow, one thing led to the other, soon we had **creativity** and **innovation** at our finger tips.

The **outcome** is in your hands, as you turn the leaves you will come across evidence that what a little **motivation** can lead to.

This is the first issue in the history of **AL BADAR SCHOOL** which is designed by a young believer, namely **IZHAR AHMED** - a jewel of a craftsman whose **natural talent** would embarrass many who are at it for years and still he is so down to earth, a true believer indeed. **Masha'Allah**.

It doesn't end here, the **theme, ideas, terms, typing, writing, composing, editing** all was carried out by the project team '**Team huffaz**' - a select group with a flair to strive against all **odds**.

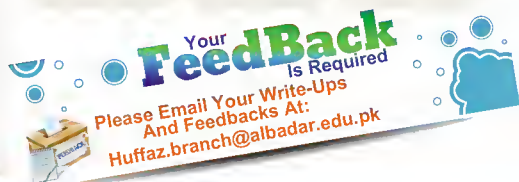

If we read between the lines there is a lesson for all of us - the 'elder believers'

I solemnly pray to **Allah (S.W.T)** that we take this lesson in a positive stride for the upheaval of the **Muslim Ummah**.

Aameen.

IBN AL-HAITHAM

INTRODUCTION:

Abu Ali al-Hasan bin al-Haitham (965 in Basra 1040 in Cairo) was a prominent scientist and polymath from the "Golden Age" of Muslim Civilization. He is described as the "World's first True Scientist". He lived mainly in Cairo dying there at age of 74. Basra was a "key beginning of learning" and he educated there and in Baghdad.

CONTRIBUTIONS AND IMPACT ON MODERN SCIENCE:

- ➔ He was the first person to test hypothesis with verifiable experiments, developing the scientific method more than 200 years before European scholars learned of it.
- ➔ He was the first person to apply algebra to geometry founding the branch of mathematics known as "Analytic Geometry".
- ➔ His 11th Century camera obscura greatly influenced Renaissance European optics
- ➔ Ibn Al Haitham's studies of the eye gave the first modern understanding of lens, retina and optic nerve as well as the mechanics of vision and perception.
- ➔ Ibn Al Haitham's experiments laid much of the groundwork for other scientific fields and enabled the European telescope and Leeuwenhoek's microscope both still in use today.
- ➔ He developed a highly successful theory which explains the process of vision as rays of light proceeding to the eye from each point on object, which he proved through the use of experimentation.
- ➔ He is also considered to be the founder of experimental psychology for his approach to visual perception and optical illusions.
- ➔ He wrote more than 200 works on a wide range of subjects ,of which at least 96 of his scientific works are known.
- ➔ He studied the mechanics of motion of a body and was a person to maintain a body moves endlessly unless an external force stops it or changes its direction of motion. This would seem equivalent to the first law of motion And he also developed the 2nd and 3rd law of motion.
- ➔ He also discussed much about Law of Gravitation before Newton.
- ➔ He had also discussed the theories of attraction between masses, and it seems that he was aware of the magnitude of acceleration due to gravity.

Egyptian Scientist Saved Japan

NEARLY three years ago, on 11 March 2011 a tsunami and earthquake hit Japan killing 15,883 people and displacing 340,000. It also caused extensive damage to buildings, railroads and homes amounting to 122 billion dollars. In the aftermath of the incident, the Fukushima Daiichi Nuclear Power Plant in east Japan was subjected to several equipment failures and accidents which led to leaking of many radioactive materials in the pacific ocean starting from 12 March.

Following this environmental disaster scientists from all over the world worked to fight off the growing danger of contaminated water.

Professor Sherif EL Safty an Egyptian born-and-raised chemist and expert in Nanotechnology developed a Nano-material which enabled simple, quick and efficient detection and removal of pollutants from water. No matter how small an amount of any pollutant is present in water, these nanomaterials can capture the pollutants quickly and absorb them, showing a colour change which is visible to the naked eye, indicating the removal of pollutants and contaminants. This material and method has proved its efficiency in solving both large-scale and small-scale problems concerning pollution.

Professor EL-Safty believes that nanotechnology has potential to solve major problems especially in fields such as environmental pollution, agriculture and medicine.

If given enough attention and development, methods like this one and many others based on nanotechnology which are currently under development can truly affect the impact of environmental pollution on the world and reduce it noticeably.

The ever-so-quick spreading of pollution is a warning for environmental organizations to start focusing on quick and efficient ways such as this one to eliminate the threat of pollution and restore our planet to its former clean and healthy glory.

Mother's Love

ALI said, I always hated my mom because she had only one eye that made her very ugly. After getting married, I had never meet her. But before her death she wrote me a letter saying "O my dear son you have been hating me throughout your whole life, because I had only one eye but before leaving this world I want to disclose you that in your childhood you had accidently lost your one eye in case of making you beautiful, I donated one of my eye to you and I still love you."

Physics

Physics, the difficult subject ever
In future I would I study it never.

Yucky derivations that make my brain shatter
Biology, I think is somehow better.

Converging and diverging types of lens
Will ban this subject if I ever get a chance.

Equations of motions, I hate to derive
How hysterical I was, when I first it strive.

The formulae and units of the physical quantity
The person who started it, was crazy I have surely.

Learning this subject is what I hate to do
The diagrams drive me crazy and their labeling too

This is the Work and this is the Energy
Proving their formulae make me crazy

The physician of this world I don't know how they did
Study this boring subject so repulsive and sordid.

Do not take it serious, we're just joking!!
Physics is the interesting subject it's not boring

Poem Written By: Shaheer Suleman X Science

Angel Inchange Of Provision

Abu hurayrah^{*} narrated that the Prophet ﷺ said, some of Allah's angels are appointed over the provision of the children Adam^{*}. Allah says to them if you see anyone who has given up all anxiety for just which is to seek Allah's pleasure then make the heavens and the earths and the children of Adam^{*} responsible for his provision to be delivered to him and if you see anyone looking about for his provision and he does it fairly then make it good and easy for him, but if he is unfair then untrust him to his desire and move aside, that man does not find provision more than what Allah has decreed for him. ▼

Why People Keep Pets?

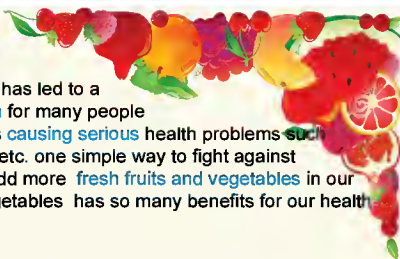

PETS are a common occurrence in modern society. Pets are animals that have been tamed. A lot of people keep pets. Each and every one of them driven by a desire or reason to keep pets. Some keep them to play when ever bored, some simply can't bear watching them suffer on the streets and take them in hoping to be forgiven for other sins they have committed. Many people also tamed dangerous animals such as snakes and crocodiles just for the challenge of it and then show them off as symbols of power. In Islam it is said that helping an animal in any way counts as a tremendous step towards one of the doors of the Heaven, making this a reason why many Muslims keep pets. However, while it is a good thing to help animals, it is said in a hadith that "Angels will not come to a home that has either a dog or picture in it" making it forbidden to keep dogs as pets in Islam. Overall keeping pets is a very good thing in Islam, with the obvious exception of dogs. The most common pets in our country are parrots and fishes but there are many more. My favourite pet is a Tortoise because I am mesmerised by its slow but steady movements and how it can survive on both land and on water.

HEALTHY Habits

DO'S
AND
DON'T'S

Do's

Today's modern world has led to a major **health problem** for many people a **poor diet**. And this is **causing serious** health problems **such** as increase in **cancer** etc. one simple way to fight against these **diseases** is to add more **fresh fruits and vegetables** in our daily life fruits and vegetables has so many benefits for our health like :

- 1- APPLE AND MANGO GIVE US IRON (BLOOD).
- 2- BANANA GIVE US FIBER.
- 3- CARROT (Juice)HELPS TO IMPROVE EYESIGHT.

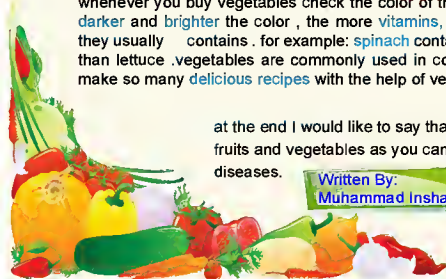

Except that there are many other **fruits and vegetables** which helps to control your health. more than any other foods, they contain basic **vitamins** and **minerals** that are important for good health and to stop diseases.

fruits come in two seasons, **summer and winter**. I like the winter season most because my favorite fruit **orange** comes in this season. orange also has one major **benefit** about winter. we need very little amount of water in winter, because of **cold environment** , but water is the most **compulsory ingredient** for our health(**so what we've to do for drinking water?**)you have to eat only one orange and this will give your body about four **glass of water** in the form of orange.

now I am going to tell one easy way to find **healthy veggies** and that is whenever you buy vegetables check the color of the vegetables , the **darker** and **brighter** the color , the more **vitamins, minerals** and **fiber** they usually contains. for example: **spinach** contains more nutrients than lettuce. vegetables are commonly used in cooking and we can make so many **delicious recipes** with the help of vegetables.

at the end I would like to say that eat as more fruits and vegetables as you can to fight against diseases.

Facts-About-Health By Usama Naveed X Science

- Every time you sneeze your heart stops a second.
- The Ebola (Kind Of Virus) virus kills 4 out of every 5 humans
- Without the lining of mucus our stomach would digest itself.
- Our blood is on a 60,000-mile journey per day .

Health Tips By:

Inshall Arif, Humayoun Hanif, Wahaj Maqsood
From Level 3

- Exercise brings a great health benefits.It keeps us physically fit and energe.It also improves brain memory as well as strengthens heart,lungs,bone and muscle.
- Exercise produces hormones in the body which makes you feel happy.
- Bones must be made strong in childhood to prevent fractures later.Calcium is vital to make them strong which is largely found in milk and other dairy products.
- Milk also never makes you fat
- A balanced diet is essential for good health.Our food must be well-cooked and once it is prepared,it must be refrigerated within 2 hours.

Dont's

CIGARETTE Smoking Is Injurious To Health.

The main constituents of cigarette are:

1. **NICOTINE** Which if in excess amount can cause **diseases** which are **extremely harmful and injurious** to health. Many diseases of lungs are caused by tobacco. The **victims** suffer from the **symptoms** as cough due to the diseases of **lungs** caused by tobacco.Human body breathes in and out via the **respiratory system**. The fresh air containing oxygen goes in the body through **nasa** openings to the lungs and the surplus **CO₂** is expelled. The cigarette smokers get their lungs adversely affected by tobacco.Human body needs the oxygen in a significant quantity which the body of a cigarette smoker cannot get.The two other **extremely dangerous** substances used in cigarette are **2.TAR** and **3.CARBON MONO-OXIDE**. These two substances are also extremely dangerous to health and if taken in a bigger amount, could be **fatal**.Today in our country and in all over the world in many countries, the **legal supply** of this deadly substance is going on. The companies, making cigarettes have got **license** of doing so people who are not cigarette smokers can also be **affected** by this as it is supplied in all over the world freely. The production of cigarette is **increasing day by day** and more people of many countries are affected. The number of cigarette smokers are increasing day by day and got **severely affected** with suffering from a number of harmful diseases.This extreme **supply** and **production** of cigarettes,all over the world and increasing cigarette smokers also affects the people who are not cigarette smokers. The people living with or working near smokers are also badly affected and are also considered as smokers. They are termed as **passive smokers**.The legal supply of cigarettes should be stopped in order to control the number of smokers and to save the other people from being affected by the deadly substance. The stopping of legal supply can help in controlling the production of cigarettes.The passive smokers will also be saved and the daily smokers who will not get it can also be saved from **being affected** by the dangerous and injurious to health cigarette. **Government** and **Health Ministry** should take the action and the people individually should also make efforts to stop it. This will be very helpful in saving people from the deadly product.In addition to this, now a days the most popularly sold drug is **Sheesha** in which our **young generation** is involving day by day. It contains **Tobacco(flavoured)** and carbon smoke which is **extremely dangerous** to health.
